Career objective

Aspiring Software Developer with strong skills in Data Structures & Algorithms, Frontend, and Backend Engineering. Seeking Software Developer roles where I can build scalable applications, write clean and optimized code, and contribute to real world software development.

Education

• B.Tech(Computer Engineering)	Sanjivani College of Engineering, Kopargaon	C.G.P.A : 8.8
• 12th (HSC)	K.B.Rohmare Jr. College, Kopargaon	81.17 %
• 10th (SSC)	Somaiya Vidya Mandir Laxmiwadi	92.60 %

skills

Development : React, Node.js, Express.js, NestJS, PHP
Database : MongoDB, MySQL
Tools : Postman, Git & Github, Swagger, Docker, CI/CD
Languages: C, C++, Java, Python

Experience

We serve healthy - Full Stack Developer Intern

- Developed responsive and cross-browser compatible web applications using the MERN stack (MongoDB, Express.js, React, Node.js).
- Designed and implemented frontend features and backend APIs to deliver scalable, end-to-end web application functionality.
- Collaborated with senior developers to build, debug, test, and enhance application features in an Agile development environment.
- Improved application performance and maintainability through code refactoring, optimization, and adherence to clean coding best practices.

Karmacts System - Software Developer Intern

- Developed reusable and responsive frontend components using React improving code reusability and maintainability across enterprise web applications.
- Designed and implemented RESTful APIs using NestJS, contributing to scalable backend architecture and supporting multiple business modules.
- Enhanced backend security by implementing authentication, authorization, input validation, and other secure coding practices, improving the overall reliability of the application.
- Optimized API performance by refining application architecture and database interactions, resulting in faster response times and improved system efficiency.
- Collaborated with the development team using Git/GitHub, integrated frontend with backend services, resolved bugs, and delivered end-to-end features following modern software development practices

Projects

1) Shubhangi Collection – Client-Based Project

Tech: HTML, CSS, JS, Node.js, Express.js, MongoDB

- Built admin dashboard for product, inventory, and appointment management.
- Implemented complete flow from buying to order delivery
- Created CRUD APIs with proper validation, routing, and error-handling.
- Integrated MongoDB for scalable data storage

2) Smart Library Management System

Tech: React , NestJS, MongoDB

- Built a full-stack Library Management System using React, TypeScript, NestJS, and MongoDB.
- Developed secure JWT authentication and role-based access control (RBAC).
- Designed and integrated REST APIs for books, users, and borrowing management.
- Created reusable and responsive UI using React, Redux Toolkit, and Tailwind CSS.

Certifications

- Full Stack Development - Board Infinity
- SQL – HackerRank
- Java Programming – NPTEL

Achievements

- 3rd Prize at AI Nexus Hackathon
- Paper Publish for Water Temperature Monitoring system
- Patent of Predictive Maintainance System
